Investment Objective	To provide income distribution and / or medium to long-term capital gains by investing predominantly in equity/equity related instruments of the companies in the Power/ Energy Sector and /or Debt/Money Market Instruments.	
Asset Allocation Pattern of the scheme	Types of Instruments	Normal Allocation (% of Net Assets)
	Equity shares and equity related instruments of companies in Power / Energy Sectors.	65 - 100
	Debt Instruments, Govt. Bonds, Money Market Instruments etc. Investment by scheme in securitised debt, will not normally exceed 40% of the debt components of the scheme.	0 – 35
Investment Strategy of the Scheme	The focus of power sector as one of the prime vehicle for development and sustaining growth, public/private sector participation and allocation huge resources for the sector provide reasonable growth opportunities in the sector that will create wealth for the investors. The scheme proposes to invest in various segments of Indian Power Sector.	
Risk Profile of the Scheme	Mutual Fund investments are subject to market risks. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarized below: <ol style="list-style-type: none"> 1. The Scheme's investment portfolio will be concentrated in power & energy associated companies. This might lead to increased volatility in the movement of NAV. 2. As with any investment in stocks and shares, the Net Asset Value (NAV) of the Units issued under the Scheme can go up or down depending on the factors and forces affecting the capital markets such as price and volume volatility in stock markets, interest rates, currency exchange rates, change in Government policies, taxation, political or economic developments, closure of stock exchanges, liquidity and settlement systems in equity and debt markets. 3. In the event that investible funds of more than 65% of the total proceeds in the scheme are not invested in equity shares of domestic companies, the proposed tax exemption on income distribution will not be available to such scheme. 	
Risk Profile of the Scheme	<ol style="list-style-type: none"> 4. Derivatives products carry the credit risk (risk of default by counterparty), market risk (due to market movements) and liquidity risk (due to lack of liquidity in derivatives). No principal amount is exchanged. A notional principal amount is agreed upon for interest calculation purposes. Only the difference between the two rates is exchanged at agreed intervals or payment dates. When fixed interest rate amount is higher, the fixed rate payer pays the difference amount i.e. fixed interest rate amount minus the floating interest rate amount or vice-versa. 	
Risk Mitigation	<u>Risk & Description specific to Equities</u>	<u>Risk Mitigants / Management Strategy</u>
	<u>Quality risk</u> Risk of investing in unsustainable / weak companies.	Investment universe carefully selected to only include high quality businesses.
	<u>Price risk</u> Risk of overpaying for a company.	"Fair value" based investment approach supported by comprehensive research.

	<u>Risk of fluctuations in the value of the investment portfolio</u>	The Scheme may use techniques and instruments such as futures and options etc. to hedge the risk of fluctuations in the value of the investment portfolio. The scheme may enter into derivatives transactions in a recognised stock exchange for the purpose of hedging and portfolio balancing in accordance with the guidelines and circulars issued by SEBI from time to time.
	<u>Concentration risk</u>	In order to diversify individual company risk, the fund will on an average and under normal circumstances invest across companies across various sectors. The quantum of exposure shall be decided on the basis of relative earnings, growth, valuations and potential valuations. As the fund intends to hold less number of stocks than a diversified growth fund, the NAV volatility (risk) will be higher than normal.
	<u>Volatility</u> Price volatility due to company or portfolio specific factors	Control risk class/sector/stock exposures to control overall portfolio volatility.
	<u>Security specific risk</u>	The overall portfolio structuring would aim at controlling risk at moderate level. Security specific risk will be minimised by investing only on those companies that have been thoroughly researched in-house. Risk will also be managed through broad diversification of the portfolios within the framework of the Schemes' investment objective and policies.
	<u>Liquidity Risk</u>	Risk will be monitored in terms of the number of days it takes to liquidate every stock in the portfolio assuming a share of the average volume traded over the previous one year. Efforts would be made to keep the average liquidation period under prudent limits prescribed internally.
	<u>Risk & Description specific to Debt</u>	<u>Risk Mitigants / Management Strategy</u>
	<u>Default Risk</u>	This shall be arrested by investing in papers which have high safety. Further this risk is minimal in case of securities issued by central / state government/.
	<u>Interest Rate Risk</u>	This shall be reduced by increasing the average duration of portfolio when interest rate is expected to decline and decrease the average duration when interest rate is expected to rise. This will minimize the negative impact of adverse movement of interest rate.

	<p><u>Liquidity Risk</u></p>	<p>This shall be avoided by keeping away from investment in thinly traded securities or securities with lower volumes.</p>
